Dust-free mixing at last

The new MX stirrers with dust extraction allow users to mix and stir in a healthy way

Dust-free work begins with mixing. This is why Festool will offer its new MX stirrers with dust extraction from January 2021. They are sophisticated in every detail since they are equipped with a new hoop guard, convenient ErgoFix height adjustment, stable rubber corners, smooth start-up and a high-torque motor. From January, this will allow painters, drywallers, plasterers and all other renovation professionals to mix and stir in a robust, ergonomic and, above all, healthy way.

Good for your health: Mixing with dust extraction

All tradespeople are all too familiar with the dust that is always produced when filling and mixing powdered materials. This is now a thing of the past since the new MX extraction solution can be simply secured to the edge of the bucket and this ensures that the dust ends up in the extractor, not in your lungs. This creates a clean, and therefore healthier, working environment with no rework required.

Work ergonomically with ErgoFix

The variable ErgoFix height adjustment enables you to mix and stir while standing, protecting your back in the future. The FastFix quick-change

system means that you can quickly and easily separate the stirrer from the stirrer basket without tools. The variable speed trigger with locking mechanism ensures smooth mixing – even for longer mixing applications.

Robust and powerful

When working on demanding applications, it is useful to have a reliable tool. This is why Festool has equipped its MX stirrers with a powerful motor with power electronics. In combination with the high-torque transmission, this ensures a constant mixing power and a long service life. Stable and anti-slip rubber corners protect the stirrer as well as the floor and wall from damage.

The new MX stirrers with a new dust extraction system will be available from specialist retailers from January 2021. Further information is available at www.festool.co.uk

The variable speed trigger protects against material splashes upon start-up with a smooth start-up. In addition, the trigger with locking mechanism ensures smooth mixing – even for longer mixing applications. The hoop guard prevents the stirrer from being switched on accidentally.
