## **Everything for Festool fans**

### **The latest products in the Festool fan shop**

**Quality meets style and emotion: The fan shop offers everything that fans of the cult power tool brand Festool could ask for, from hoodies to caps through to high-quality spirit levels. Take a look!**

Festool fans – and aspiring fans – take note: You can now see the new fan shop products for Autumn 2023. First up is the classic flannel shirt with two practical chest pockets, made of 100% cotton. It is comfortable to wear and warm even in colder outside temperatures. Clever detail: The outside of the shirt is plaid, while the inside is dark blue. The snapback cap is made to match the flannel shirt and is likewise made of 100% cotton. Its shield protects the wearer against sunlight. With its snapback buckle, the size of the cap is adjustable. For colder temperatures, however, the Festool bobble hat is the number one choice. It is made with a high proportion of Merino wool, ensuring that it is not only pleasantly warm but also delightfully comfortable. The brim can be rolled down, allowing the hat to be worn loosely if preferred. Working with the new Festool spirit level is a major highlight of any project. It can be safely stored and transported in the Systainer handle. The spirit level has a horizontal and vertical level and provides a measuring accuracy of +/- 1.0 mm/m. It features a metric scale on the front and an inch scale on the back. Practical: The contact surface has a prismatic design, making it perfect for contact with shafts and tubes.

Thanks to its lightweight aluminium profile (AlMgSi 0.5 naturally anodised, dimensions: 35.4 x 1.2 x 2.6 cm), this spirit level, made in Germany, features high quality and a long service life.

### **Sawing, cutting, then opening bottles after work**

Imagine having the right saw blade to hand whenever you need to do sawing work. Thanks to our saw blade pouch, this can be a reality rather than wishful thinking. The pouch is suitable for all Festool circular saw blades up to a diameter of 260 millimetres, and is ideally suitable for safe transportation of saw blades. An exterior compartment with a zip offers additional storage room. The pouch has dimensions of 32 x 31.5 x 7 cm. Small repairs can be performed easily with the high-quality multi-tool from RICHARTZ. The multi-tool is made of stainless steel and anodised aluminium, and is available in a stylish Festool design. It provides a wide range of functions: Pliers, wire cutter, file/slotted screwdriver, can opener/bottle opener, slotted screwdriver, cross-head screwdriver, saw, large blade, glass breaker and bit set with nine bits. Each function can be locked easily and precisely and released at the touch of a button. A storage bag and an original Festool bit set are also included as standard. Material: Stainless steel, anodised aluminium. Last but not least is the bottle opener in the well-known Festool T-LOC shape, to ensure a good start to any evening or refreshment break. The bottle opener also includes two magnets on the back, enabling it to be easily attached to the fridge. All products are available at selected specialist retailers.
