More than ear protection

The new Bluetooth® GHS 25 I ear protection from Festool

Small, light and convenient – the cordless Bluetooth® GHS 25 I hearing protectors are your daily companion in the workshop or on the construction site.

Noise on the construction site and in the workshop is not only harmful for the ears in the long run, but also distracts you from your work. The new GHS 25 I devices from Festool turn the volume level down to a healthy degree. You are therefore protected from noise when working, and can simultaneously make phone calls via Bluetooth® 5.2 with true wireless technology or enjoy your favourite music. So you don't have to do without professional ear protection, as, thanks to the innovative microphone technology, you hear only what you really want to hear. You can hear ambient noises such as speech within a safe listening volume (up to 79 dB) without a problem. The conversation mode makes this possible. You therefore don't have to remove the ear protection to speak to colleagues. This provides maximum safety and convenience. Loud ambient noise outside the safe sound level of 79 dB (corresponds to EU standard EN352) is meanwhile blocked. Noise reduction is at 25 dB (NRR).

When making phone calls, the built-in microphone effectively suppresses disruptive background noise. The simple touch control operation directly on the ear protection is also convenient here. The GHS 25 I is also in line with the IP67 standard, and is therefore protected against dust, water and sweat.

After the work is done, the earplugs can simply be recharged in the charging case supplied, which also acts as a power bank for the earplugs when on the move. Charging enables up to 13 hours of runtime. Recharging in the charging case can extend the runtime by a further 25 hours. With the multifunctional ear protection, you can listen to music or make phone calls while relying on the advantages of professional ear protection, as it fulfils the requirements for professional ear protection according to EU standard EN352. The new GHS 25 I is available at specialist traders from May 2023.
