## **Everything in perfect order**

### **With the new Systainer<sup>3</sup> ToolBag from Festool**

**The Systainer<sup>3</sup> ToolBag ensures quick organisation and easy transport of hand tools and accessories. The robust tool bag with Systainer<sup>3</sup> interface is especially sturdy and provides space for numerous tools.**

The ToolBag is made of high-quality textile and provides a carrying capacity of up to 20 kg, and has proven to be exceptionally robust in day-to-day use. High flexibility due to individual arrangement of the hand tools. It also offers a wide range of options with internally and externally attached compartments. The ToolBag includes a sturdy Softgrip handle and a shoulder strap with shoulder pad for ideal carrying comfort. What's more, it is compatible with the entire Festool Systainer system – and is therefore easy to connect and transport. The inner pockets can be arranged to suit individual requirements, meaning that the ToolBag can be fitted for any application in a flash. With its recessed grip, it is also easier to remove from the vehicle shelf. Practical: The outer pockets on the side offer further storage space for hand tools and accessories. Business cards can be stored cleanly and tidily in a separate compartment. There is a bag with a zip fastener at the front and one at the back of the ToolBag. These can store documents and small parts neatly and enable them to be quickly accessed without spending a long time searching. From the workshop, to

transportation by vehicle, right through to the construction site – always perfectly organised. Thanks to the special tool reception, the ToolBag can be directly integrated into bott vario3 vehicle equipment. The Systainer<sup>3</sup> ToolBag is available at selected specialist retailers from October.
