Granat – the all-rounder of the abrasives

Starter set and abrasives Systainer from Festool

When it comes to abrasives, quality and efficiency are key. And that's precisely what Festool delivers with its premium abrasive Granat: From coarse to fine sanding, there is an optimum solution for virtually every application. From May, the Granat starter set and the handy abrasives Systainer will be available from Festool.

In everyday applications, it is particularly important that high-quality abrasives offer a long service life as well as fast and efficient sanding. Festool delivers just that with its Granat abrasive, since the special non-stick coating greatly minimises clogging of the abrasive. What's more, the unique hole pattern of the Multi-Jetstream 2 system (D150) ensures optimised extraction. In practice, this means: virtually dust-free sanding and greatly reduced clogging on the abrasive wheel. The results are plain to see: The desired surface is achieved quickly and effectively. This way, Granat ensures work can continue without constantly having to stop to change abrasives – which increases productivity. If you do need to change abrasives, however, the abrasive wheel attaches to your sanding pad with ease using the hook-and-loop fastener.

Perfect sanding finish and long service life

It's all in the mix: With Granat, the innovative mixed grain of ceramic and aluminium oxide ensures a high material removal rate. This prevents the

abrasive from clogging – even during long sanding sessions. The self-sharpening ceramic grit ensures an impressive service life beyond that of conventional paper abrasives. This saves time and money.

Clean working environment

Abrasives and sanding pads with optimum dust extraction and a compatible hole pattern put an end to the problem of dust accumulating on the sanding area. This prevents you from breathing in hazardous dust and leaves behind a clean working environment. It also prevents the abrasive from clogging up too quickly, allowing you to carry out your sanding work without interruptions.

Festool particularly recommends Granat abrasives for painters, varnishers and carpenters for working with the latest paint systems, such as VOC varnishes as well as the hardest substrates and plastics, mineral materials, acrylics, putties and fillers. The Festool Granat starter set and handy abrasives Systainer will be available from festool.co.uk or specialist dealers from May 2024.
